Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 Excerpt: .after inoculation into the lower mammals, as the guinea pig. Some more easily applied pathological test is an urgent desideratum. If incident at an early age the displacement of the mediastinal organs may become extreme; nevertheless, life may be prolonged, even under these conditions of severe cardiovascular strain, for several years (vide Radiograms 63A and B). 1. Phthisis fibro-disseminata is generally bilateral, and often appears to be the direct result of fibrosis following subacute types of the same name (Chap. III). When it is bilateral, it is usually accompanied by double emphysema, which throws into bold relief the opaque foci when viewed on the fluoroscopic screen. The picture becomes even more striking after an attack of asthma, a complication which is frequent in these individuals as they advance in years. (a) Archibald E, aet. 28 (26.2.18). Clinical: has been in the army since boyhood: cough +: emaciation +: night sweats--: heart apex beat normal: flattening and diminished movement right apex: crepitations both apices. Radiogram 50: disseminated fibroid tubercle with cylindrical dilatation of tubes throughout: some cavitation at right apex: small bronchopneumonic nodes and thickened bronchi: several patches of consolidation below the left axilla, and some excavation in the lowest (arrow) Radiological diagnosis: fibroid disseminated tubercle. Those cases in which the nodules become fibrocalcareous may be included in this category. They are often accompanied by calcareous metamorphosis of the lymphatic glands in the neck, in the axilla, and of the glands along the internal mammary artery. In...
