

Evaluation of Novel Metalorganic Precursors for Atomic Layer Deposition of Nickel-based Thin Films

Filesize: 8.09 MB

Reviews

*This ebook is fantastic. It is among the most awesome pdf we have study. You wont really feel monotony at at any time of your time (that's what catalogs are for regarding should you ask me).
(Liliana Kilback)*

EVALUATION OF NOVEL METALORGANIC PRECURSORS FOR ATOMIC LAYER DEPOSITION OF NICKEL-BASED THIN FILMS

To read **Evaluation of Novel Metalorganic Precursors for Atomic Layer Deposition of Nickel-based Thin Films** eBook, make sure you refer to the link below and download the ebook or have accessibility to other information which are in conjunction with EVALUATION OF NOVEL METALORGANIC PRECURSORS FOR ATOMIC LAYER DEPOSITION OF NICKEL-BASED THIN FILMS book.

GRIN Verlag Jan 2016, 2016. Taschenbuch. Book Condition: Neu. 211x151x11 mm. Neuware - Master's Thesis from the year 2015 in the subject Physics - Electrodynamics, grade: 1.0, Dresden Technical University (Faculty of Electrical and Computer Engineering/Institute of Semiconductors and Microsystems), course: Nanoelectronic Systems, language: English, abstract: Nickel and nickel(II) oxide are widely used in advanced electronic devices. In microelectronic industry, nickel is used to form nickel silicide. The nickel mono-silicide (NiSi) has emerged as an excellent material of choice for source-drain contact applications below 45 nm node CMOS technology. As compared to other silicides used for the contact applications, NiSi is preferred because of its low resistivity, low contact resistance, relatively low formation temperature and low silicon consumption. Nickel is used in nickel-based rechargeable batteries and ferromagnetic random access memories (RAMs). Nickel(II) oxide is utilized as transistor gate-oxide and oxide in resistive RAMs. Atomic Layer Deposition (ALD) is a special type of Chemical Vapor Deposition (CVD) technique, that is used to deposit very smooth as well as homogeneous thin films with excellent conformality even at high aspect ratios. In spite of huge number of practical applications of nickel and nickel(II) oxide, a few nickel precursors are available for thermal based ALD. Moreover, these precursors have resulted in poor film qualities and the process properties were also limited. Therefore in this master thesis, the properties of various novel nickel precursors had to be evaluated. All novel precursors are heteroleptic (different types of ligands) complexes and were specially designed by the manufacturer for thermal based ALD of pure nickel with hydrogen as a co-reactant. In order to evaluate the novel precursors, a new methodology was designed to test small amounts (down to 2 g) of precursors in a very time efficient way. This methodology includes: TGA/DTA curve analyses of the precursors, thermal...
